3: Latta Y-5 (1923-1948)1949 NS29 Yokuts NS29

"We made a fort, principally on account of our animals. The Indians brought otter skins, and several kinds of fish, and bread made of acorns, to trade.

"Among them were several who had come to live among these Indians when the missions were broken up, and who spoke Spanish fluently. They informed us that they were called by the Spainards 'mansitos', (tame) in distinction from the wilder tribes of the mountains.

"They, however, think themselves very insecure, not knowing at what unforseen moment the sins of the latter may be visited upon them. They are dark skinned, but handsome and intelligent Indians, and live principally on acorns and the roots of the tule, of which also their huts are made."

The last is one of the few complimentary things written by Frémont about Indians. A similar account of the Kaweah River Indians is given in the report of the survey of July, 1850, by Lieutenant George H. Derby. An extract from the Derby report follows:

"Upon the 14th we arrived at the river Frances, [Kaweah] a large stream nineteen miles to the north of the Tule. This stream flows nearly west from the hills and empties into the Tache Lake about twenty miles north of its southeastern extremity.

"It is, at the point upon which we arrived, divided into five branches or sloughs, four of which separate from the main river, about five miles above, joining again from one to ten miles below, while the southern branch has a separate and distinct course from the Sierra which joins the main stream in the marshy ground near its junction with the lake.

"The country, eight miles in length by six in width, contained between these branches, is a beautiful, smooth, level plain, covered with clover of different kinds, and high grass, and thickly shaded by one continuous grove of oaks of a larger and finer description than any I have seen in the country.

"At this time each of the creeks were at its height, they are deep and four of them much wider than the Tule River. Their beds were also obstructed with floating and sunken timber previously felled for bridges, which the high stage of the water rendered useless; and we would have found it difficult to cross had it not been for the kind assistance of the neighboring Indians who flocked to meet us, and eagerly went to work carrying instruments and other property upon their heads and
